Why Homeowners Love Legacy

Legacy sliding sash windows bring together the timeless beauty of traditional design with the comfort and practicality of modern living.

Inspired by classic timber sash windows, Legacy captures the charm and elegance of traditional sash windows, while introducing the benefits homeowners expect today - including improved warmth, security, low maintenance living, and smart technology.

For homeowners seeking the most authentic traditional appearance, Legacy Premier brings together a collection of features, including 90° timber-look joints and a slim midrail inspired by original timber sash windows.

For added reassurance, Legacy Protect introduces smart-capable technology, with optional Kubu Smart Sensors available for intelligent real-time window status notifications.

With a wide range of features, colours, and finishing touches available, every element can be combined to create a Legacy sash window that feels perfectly at home in both traditional and contemporary properties alike.

Authentic Design

Inspired by original timber sash windows, without the upkeep

Smart Technology

Optional smart sensors let you know the status of your windows, wherever you are.

Modern Security

Robust locking and security upgrades for added everyday reassurance.

A Warmer, Quieter Home

Modern glazing and frames help keep warmth in and unwanted noise out.

Did You Know?

Legacy windows can be recycled and repurposed at the end of their long life, supporting a considered approach to sustainability.

Did You Know?

The UK has the oldest housing stock of any European country.

Across Britain, traditional homes continue to shape the identity of our streets and neighbourhoods. Respecting and preserving original architectural features helps keep that heritage alive for future generations.

Late 1600s

The sliding sash window arrives in Britain, introducing an elegant new way to bring light and ventilation into the home.

Georgian

Symmetry defines the Georgian era, with elegant proportions and multi-pane sash windows becoming a hallmark of British architecture.

History of Sash Windows

Few window styles have stood the test of time quite like the sliding sash window.

First introduced in Britain during the late 1600s, sash windows became a defining feature of Georgian (c. 1714 - 1830) and Victorian (c. 1837 - 1901) architecture, admired for their elegant proportions, timeless symmetry, and ability to bring light and ventilation into the home.

Today, their enduring charm remains just as desirable. From period renovations and countryside cottages to contemporary homes inspired by traditional design, sash windows continue to bring warmth, character, and elegance to properties across Britain.

Legacy has been designed to honour that heritage while introducing low maintenance, improved energy efficiency, enhanced security, and modern smart home connectivity.

Victorian

Larger panes of glass transform sash window design, while decorative sash horns become an increasingly distinctive feature.

Edwardian

Sash windows evolve again, with lighter, more decorative designs bringing character to homes of the period.

Today

Today, many homeowners are looking to bring back the character of past eras, whether restoring a period property or adding traditional charm to a new-build home.

Heritage & Conservation

Heritage and conservation projects often require window designs that carefully respect the original appearance and architectural character of a property.

Attention to details such as frame proportions, sightlines, glazing bar layouts, traditional features, and authentic finishing touches can play an important role when submitting conservation applications.

Legacy sash windows have already helped support approvals across a wide range of heritage-sensitive projects, including installations within conservation areas and Grade II listed properties.

Need help with your application?

Request a Conservation Pack from your installer.

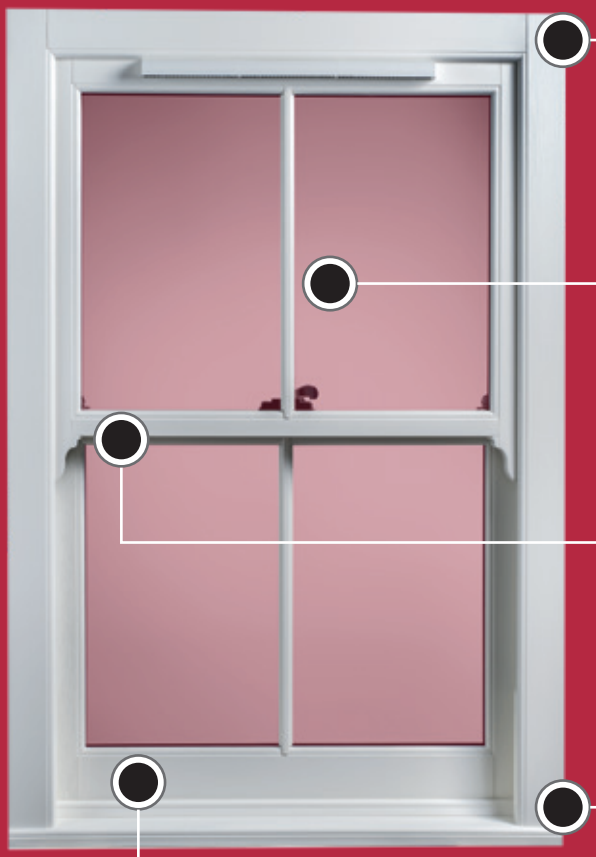

Conservation Essentials

- **Research Local Guidelines**
- **Preserve Traditional Details**
- **Respect Original Proportions**
- **Prepare Supporting Documentation**
- **Work with Experienced Specialists**

What do conservation officers look for?

Mechanical Joints

Conservation officers look closely at frame construction. Timber-look 90° joints avoid tell-tale diagonal uPVC welds for a more authentic appearance.

Astragal Bars

Glazing bars should reflect the property's original style. Victorian sash windows often featured a single vertical bar, while Georgian windows typically used a grid of smaller panes.

Slim Midrail with Sash Horns

Original proportions matter. Slim midrails and sash horns can help replicate the traditional detailing conservation officers expect to see on many period properties.

Timber-look Finish

Conservation officers often favour finishes that closely resemble original timber. Our Matt Chalk White is a particular favourite, recreating the look of traditionally painted timber.

Deep Bottom Rail

A deeper bottom rail helps recreate the proportions of original timber sash windows, even though modern balance mechanisms mean the extra depth is no longer functionally required.

When it comes to conservation, there's no one-size-fits-all approach. What's right for a Victorian property may not be right for a Georgian one. Conservation officers will look at the style, proportions and detailing of the original windows, so understanding what would have been there is an important place to start.

Legacy gives you the flexibility to recreate those details, with a choice of glazing bar layouts, traditional features and timber-look finishes to complement the age and character of the property.

Woodgrain Finish

Included with Premier, you can choose from our timber-look woodgrains, or Matt Chalk White for the look of traditionally painted timber.

Mechanical Joints

Traditional 90° mechanical joints replace standard welded uPVC corners to recreate the appearance of authentic timber window construction.

Run-through Sash Horns

Run-through sash horns add an authentic touch to sash windows, creating a traditional appearance inspired by the character and craftsmanship of original timber designs.

Legacy™ Premier

Legacy Premier brings our most authentic sash window features together in one complete package.

Timber-look mechanical joints, run-through sash horns, a slim midrail and deep bottom rail recreate the proportions and detailing of traditional timber sash windows, while heritage hardware and woodgrain finishes complete the look.

We've taken the guesswork out of choosing upgrades by bringing together the details that give Legacy its most authentic appearance. Yet behind the heritage look lies the strength, energy efficiency and low maintenance of modern uPVC.

Premier features can also be selected individually, giving you the freedom to create your own Legacy specification.

Slim Midrail

The elegant 37mm slim midrail helps recreate the refined sightlines traditionally associated with original timber sash windows. Available with run-through sash horns only.

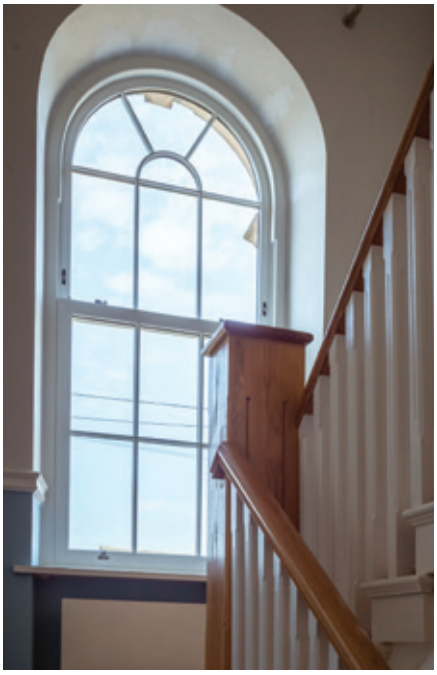

Deep Bottom Rail

Designed to closely recreate the appearance of traditional Victorian timber sash windows, the fully mechanical deep bottom rail adds visual depth and authenticity to the lower sash.

Heritage Hardware

With Premier, your windows come with our more decorative heritage lock and tilt knobs, available in your choice of eight finishes.

Conservation Case Study

The renovation of this Grade II-listed Georgian home called for windows that would sit naturally within its historic architecture, while bringing the property back to life.

24 Legacy sash windows were specified, with Georgian-inspired astragal bars, mechanical joints, deep bottom rails and a white woodgrain finish creating an authentic timber-style appearance.

A bespoke arched sash provides a standout feature, with glazing bars forming an elegant sunburst design that complements the home's Georgian architecture.

Gaining approval was an important part of the project. Detailed drawings, product specifications and supporting documentation gave the conservation officer the information needed to assess the proposed design.

With approval granted, the finished installation restores the traditional character of the property while bringing the benefits of modern uPVC.

Trickle Ventilation

Trickle vents help improve indoor air quality by allowing a steady flow of fresh air into the home, helping reduce condensation and moisture build-up. Ventilation is also an important consideration under Part F of the current Building Regulations.

Airflow is measured in Equivalent Area (EA), with our head vent achieving up to 5,000 EA and sash fitted vents between 2,000 and 8,000 EA, depending on window size.

Concealed Head Vent

Sash Fitted Vent

Comfort & Performance

A comfortable home starts with windows designed to perform in every season.

Advanced double glazing and multi-chambered frame construction work together to help reduce heat loss and outside noise, creating a warmer, quieter and more comfortable home throughout the year.

'A' Energy Rated

Legacy sash windows achieve an impressive 'A' energy rating as standard, helping improve thermal efficiency and reduce heat loss throughout the home.

Multi-Chambered Frame

Advanced multi-chambered frame construction traps pockets of air within the profile, helping improve insulation and retain warmth inside the home.

1.2 U-Value Upgrade

Our enhanced 1.2 U-value upgrade delivers even greater thermal performance, exceeding modern energy efficiency standards without relying on costly krypton gas or specialist glazing.

Both sashes slide vertically for ventilation, while the easy-clean tilt facility allows the external glass to be cleaned conveniently from inside the home.

Security & Safety

Feeling safe at home matters. Legacy sash windows combine traditional looks with modern security and safety features designed to provide everyday reassurance without compromising aesthetics or ease of use.

From enhanced locking upgrades to optional fire escape functionality, every detail has been designed to support modern living while maintaining the timeless appearance of traditional sash windows.

PAS 24 Security Upgrade

For added reassurance, Legacy sash windows are available with an enhanced PAS 24 security upgrade featuring premium locking mechanisms and top sash security blocks for increased protection.

Required for new-build projects, the PAS 24 upgrade supports compliance with Document Q requirements within current Building Regulations.

Fire Escape Facility

Where required, Legacy sash windows can be specified with a fire escape facility designed to help provide a compliant means of escape.

To comply with Building Regulations, escape windows must provide a minimum unobstructed opening of 0.33m^2. Please speak to us at the point of enquiry for further guidance.

PLC Scheme
Evaluating Energy Efficiency

Shown: Magnetic non-locking travel restrictor.

Travel Restrictors

Travel restrictors limit how far the bottom sash can open, giving you greater control over the opening while still allowing fresh air into the home.

Ideal for family homes and upper-floor windows, they provide added reassurance without affecting the traditional appearance of your sash windows.

Locking and non-locking options are available.

Respecting the Design

Sash windows are often chosen for their character - especially in period properties, conservation areas, and design-led new homes.

That's why Legacy Protect has been designed to be completely hidden within the finished window.

From the outside, nothing changes.

From your perspective, you gain reassurance.

Legacy™ PROTECT

Powered by Kubu

Smart Technology Built In

Legacy sash windows are smart-capable, ready for optional Kubu Smart Sensors to be added whenever you choose. Once connected, Legacy Protect gives you useful updates and reminders through the Kubu app, helping you keep an eye on your windows.

What can Legacy Protect do?

Check Your Windows
See at a glance whether your sash windows are open or closed.

Get Real-time Alerts
Receive notifications if an armed sash detects unexpected movement or a potential break-in attempt.

Left a Window Open?
Get an alert if you leave home while a window is still open.

Set Helpful Reminders
Schedule reminders to check your windows at times that suit your routine.

Weather Alerts
Get useful alerts for incoming rain and high pollen levels.

Security you trust, made smarter

Legacy Protect works alongside the mechanical security already built into your sash windows. You still lock your windows as normal and use your keys – Legacy Protect simply adds an extra layer of awareness.

Smart Home Integration

Legacy Protect can link with compatible smart devices including lighting, heating and voice assistants such as Amazon Alexa. You can even use voice commands to check the status of your sash windows.

Get Smart Sensors

You can order your Kubu Smart Sensors online at *www.getkubu.com/legacy-protect*.

A Kubu Home Hub and Wi-Fi are required for remote connectivity and notifications when away from home.

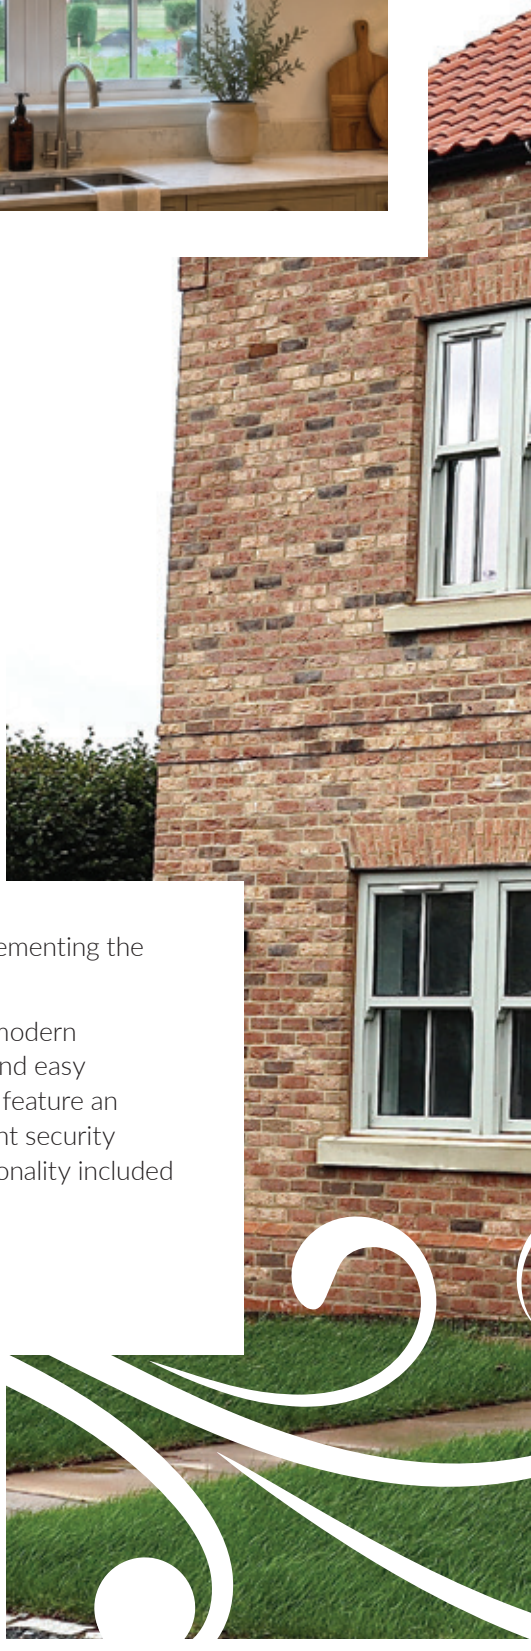

Legacy Protect is exempt on fixed sashes and windows less than 400mm wide.

New-Build Case Study

This beautiful new-build home showcases how traditional sash windows can complement modern architecture, bringing timeless character to a newly built property.

Designed with careful attention to detail throughout, the home combines traditional village charm with the comfort, quality and performance expected from modern living.

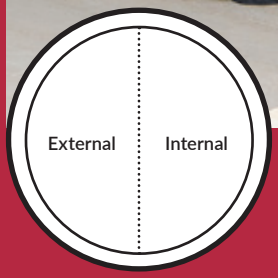

Legacy was chosen to add kerb appeal in keeping with the character of the surrounding area, while delivering excellent thermal efficiency, security and everyday performance.

The Agate Grey finish creates an attractive contrast against the brickwork, helping the windows stand out while complementing the home's traditional styling.

Behind the classic appearance, modern technology provides durability and easy maintenance. The windows also feature an enhanced Document Q compliant security upgrade, with fire escape functionality included where required.

Colours & Finishes

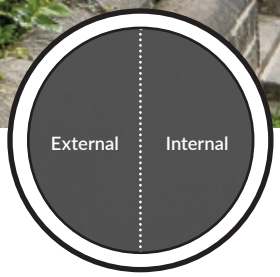

Our collection includes 18 woodgrain colourways, from timeless neutrals and heritage shades to finishes full of character, with bespoke colours also available.

By choosing a woodgrain finish, you can add texture and depth to your windows for a more traditional, timber-inspired look. Or, for something more personal, choose a bespoke colour to complement your home.

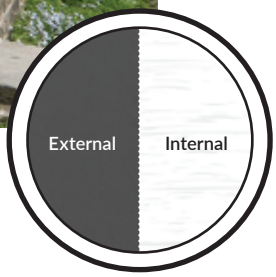

Colours can vary in print. Ask your installer for a swatch.

Window Accessories

Every home is different, which is why Legacy offers a choice of hardware styles, finishes and practical accessories to bring individuality and character to every window.

Classic

Heritage

Lock & Tilt Button

Choose between classic or heritage lock and tilt button styles, then personalise your sash windows further with a range of optional extras.

Lift Hooks

Every sash window comes complete with two lift hooks as standard.

Locking

Non-Locking*

Travel Restrictors

Limit how far the bottom sash can open while still allowing fresh air and ventilation. Locking and non-locking options are available.

Pole Eyes

Ideal for windows positioned out of easy reach, allowing the top sash to be operated using a hooked pole.

D-Handle

Fitted discreetly beneath the top sash, the D-handle makes opening and closing the window easier.

Hardware Colours

Our hardware is available in eight different finishes. *Please note that our non-locking travel restrictors are available in white, chrome, brushed chrome and matt black only.

Styles and Shapes

Every home has its own character, and your windows should complement it. Legacy can be made in a range of styles, shapes and glazing bar layouts to suit your home.

Sash Proportions

While a 50/50 sash split is our most popular choice, we can also offer 40/60 proportions or something completely bespoke. The minimum transom drop from the top is 350mm.

Glass

Double Glazing

Legacy comes with 24mm double glazing, featuring argon gas, Low-E glass and a warm edge spacer bar to help keep more warmth inside your home.

Toughened Glass

A glass upgrade, stronger than standard glazing and, if broken, designed to crumble into small pieces rather than sharp pieces. The bottom sash glass is toughened as standard.

Laminated Glass

Made with a protective layer between the panes, laminated glass is designed to hold together if broken.

Solar Control Glass

Helps limit heat from the sun, making it a useful choice for rooms that receive lots of direct sunlight.

Obscure Glass

Enjoy more privacy without losing natural light, with a choice of patterns and privacy levels from 1 (least obscure) to 5 (most obscure).
